HIKMICRO HIKTac TC19 & TC19L

Small footprint, serious thermal capability

Thermal optics are getting smaller, lighter, and smarter, and the HIKMICRO HIKTac TC19 and TC19L are a good example of where the market is heading.

Designed around a compact 256 × 192, 12 µm thermal sensor with sub-18 mK NETD, the HIKTac delivers surprisingly detailed images from an optic weighing roughly 260-290 g, depending on configuration.

European retailers describe it as nearly collimator-sized, while Australian users have highlighted its practicality for lightweight hunting and pest-control applications.

The 19 mm F1.0 lens provides a broad 9.2° field of view and a quoted detection capability out to around 900 m. However, as with any thermal, detection should not be confused with reliable identification at that distance.

The large 3.1-inch AMOLED display and HIKMICRO's HSIS shutterless technology make the viewing experience particularly attractive for fast-moving applications.

The TC19L takes the concept further by adding a 1 000 m laser rangefinder and ballistic calculator, turning a compact thermal into a genuinely information-rich sight.

European and Australian feedback broadly points to the same conclusion: the TC19 is about mobility, speed and simplicity, while the TC19L adds precision and range information.

For tactical training, pest control, lightweight hunting platforms, and air rifle users, this could be one of HIKMICRO's most interesting compact thermal offerings yet.

The price point is seriously good, and this little unit can now be on the shopping list of all outdoor and shooting enthusiasts.

HIKMICO TC19L/TC19 is imported and distributed by Thermal Africa, South Africa's exclusive HIKMICRO partner – **www.thermalafrica.co.za**

Stock is available throughout the country, online and in leading outdoor and hunting stores.
